

PROJECT ANALYTICS

AdventureWorks Cycles

Hi There....

WELCOME

02

Want to know about us

We are a large, multinational manufacturing company that produces and distributes bicycles, parts and accessories to commercial markets in North America and Europe.

CENTRAL PROBLEM

04

Profits have been declining in recent months

Through data analysis, we will identify the reasons why profits have declined in recent months.

RESULTS PER MONTH(JANUARY)

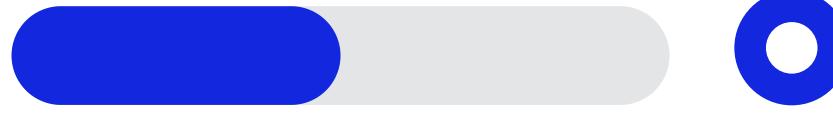

\$421.257,18

FACTORS DETECTED FOR DECREASING PROFITS

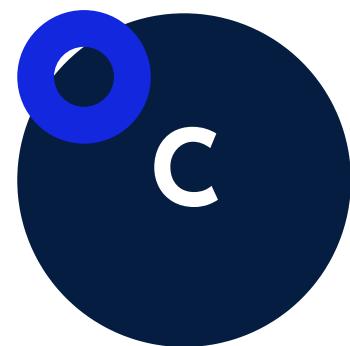

Notable reasons why profit has been declining in recent months.

In April there was the lowest rate of profit in recent months. The city of Bordeaux in France is one of the places that had less sales.

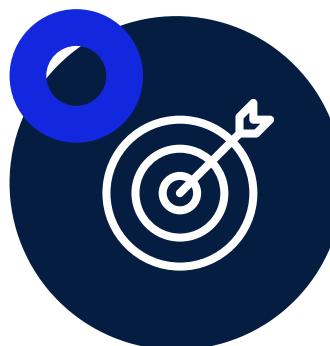

May was the month with the most sales for the company, but it was also the month with the highest cost, the highest costs were detected in Nevada in the US and in Bordeaux in France, both having the bicycle and components as the main reason for the increase in cost.

The financial crisis in 2008 is one of the main factors for the decrease in profits and the rising costs.

CONCLUSION

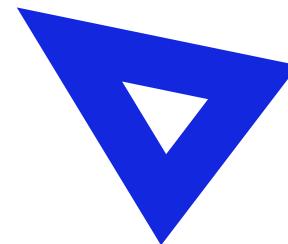

This information was collected through data provided by the company and this conclusion is intended to solve the problem of AdventureWorks Cycles.

Costs should be expected to decrease mainly with bicycles and accessories in the cities of Bordeaux and Nevada.

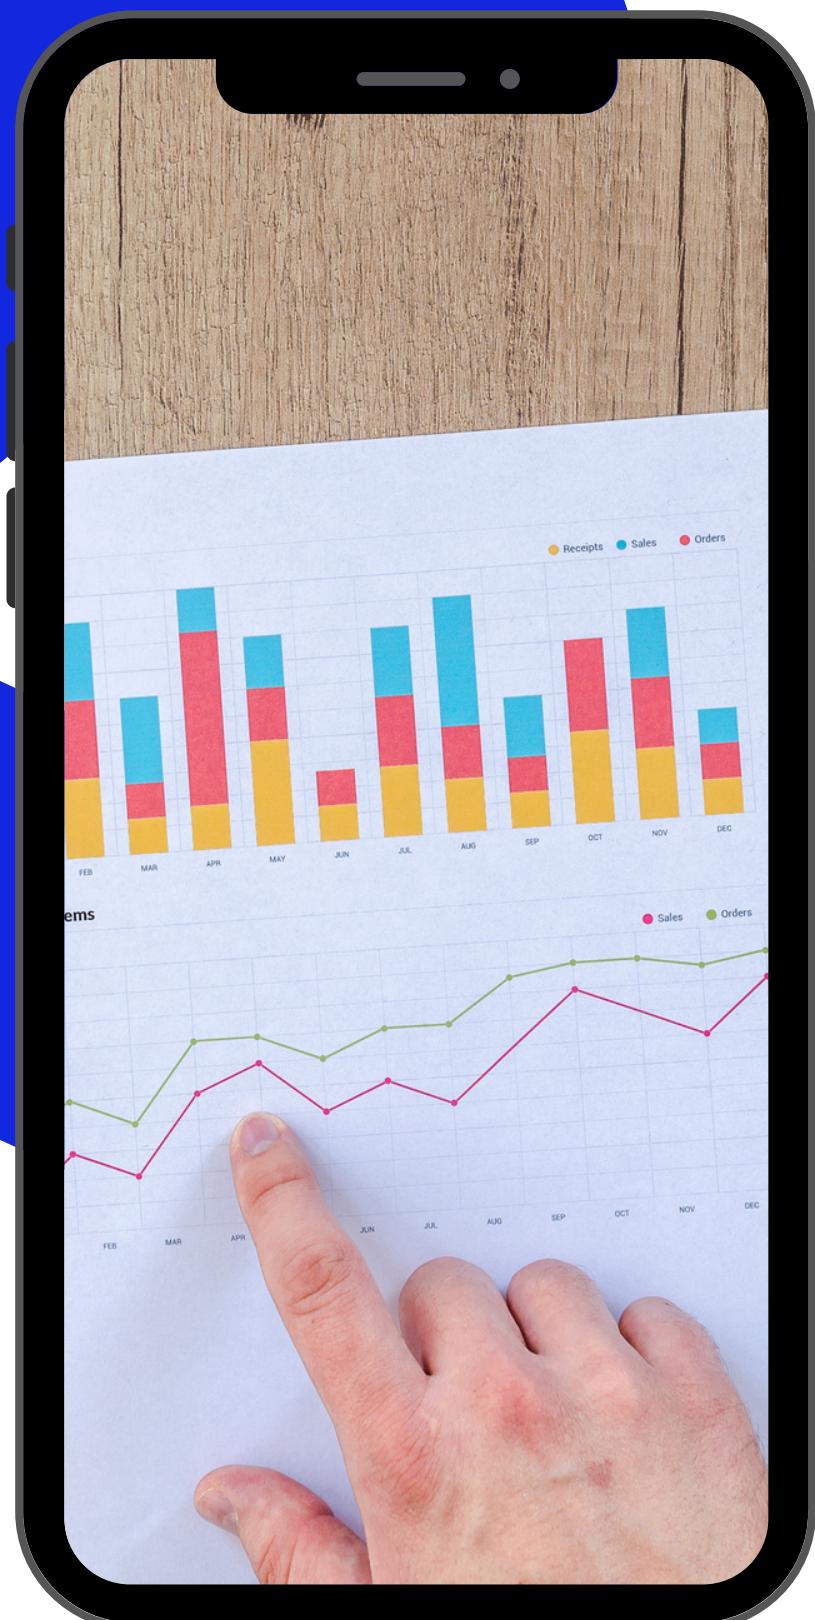

The company should continue to sell high quality products and increase the company's awareness in regions that do not yet consume its products.

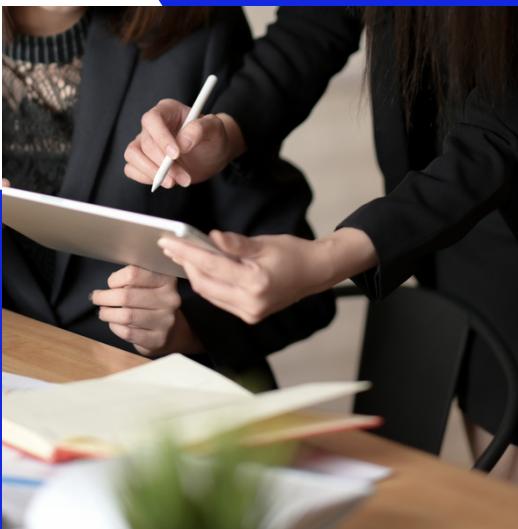

The company must constantly update itself in the market, be able to establish itself in certain regions, have sales strategies, especially in crisis. Control the relationship between costs and financial sustainability to recover profitability.

WITH THE ANALYSIS DONE, THE RESULTS SHOULD IMPROVE IN THE COMING MONTHS

All monitoring of results will be monitored in real time by Tableau.

THANKS

Our goal is to improve our customers' businesses
